-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 13 April 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Allowable Subject Matter

1. Claims 27 and 28 allowed.
2. Claims 10 and 23 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2, 3, 7, 11, 13, 15, 16, 20, 24 and 26 rejected under 35 U.S.C. 103(a) as being unpatentable over Nishida (US 2002/0030780) in view of Winker et al. (5,504,603)

Regarding Claims 2, 3, 7, 11, 13, 15, 16, 20, 24 and 26, Nishida et al. disclose an active matrix liquid crystal display panel where in Fig. 19, orientation films 23 and 56, compensation plate 35 and polarization layer 34 and 5 are disclosed. Nishida et al. fail to disclose the required A-plate, O-plate and A-plate combination for compensation layer. However, Winker et al. disclose an optical compensator for improved gray scale performance in liquid crystal display where in Fig. 12, the required A-plate, O-plate and A-plate combination for the compensation layer is disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required A-plate, O-plate and A-plate configuration

for the compensation layer in Ishida et al. as taught by Winker et al, in order to have a liquid crystal display device with higher performance.

5. Claims 5, 6, 8, 12, 18, 19, 21 and 25 rejected under 35 U.S.C. 103(a) as being unpatentable over Nishida (US 2002/0030780) in view of Winker et al. (5,504,603) further in view of Skarohlid (6,266,114)

Regarding Claims 5, 6, 8, 12, 18, 19, 21 and 25 Nishida et al. disclose an active matrix liquid crystal display panel where in Fig. 19, orientation films 23 and 56, compensation plate 35 and polarization layer 34 and 5 are disclosed. Nishida et al. fail to disclose the required A-plate, O-plate and A-plate combination for compensation layer and the required retardation values. However, Winker et al. disclose an optical compensator for improved gray scale performance in liquid crystal display where in Fig. 12, the required A-plate, O-plate and A-plate combination for the compensation layer is disclosed. Furthermore, Skarohlid discloses a method and apparatus for compensating a liquid crystal display where in the claims section the required values for the retardation are disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required A-plate, O-plate and A-plate configuration for the compensation layer and the required retardation values in Ishida et al. as taught by Winker et al and Skarohlid respectively, in order to have a liquid crystal display device with higher performance.
